What is Copin

Copin focuses on analyzing and copying on-chain traders, particularly on decentralized perpetual exchanges: GMX, Synthetix, DYDX, and more.

Some things you can do with Copin

Analyze, evaluate, and copy the trading strategies of on-chain traders.

1. Analyze On-Chain Trader Data

Copin provides comprehensive on-chain trader data gathered from blockchain networks and decentralized exchanges. Users can analyze this data to gain insights into the performance, positions, and trading strategies of on-chain traders.

2. Evaluate Trader Rankings

Copin displays a ranking of on-chain traders based on different criteria such as ROI, PnL, win-rate, and more. Users can assess the rankings to identify successful traders and evaluate their past performance.

3. Backtesting

Enables users to assess the historical performance of traders or trading strategies before choosing to copy them. These features offer valuable insights into past performance, aiding users in evaluating potential future success.

4. Copy trading

Copin enables users to copy the trading signals of elite on-chain traders. Users can align their trades with those of successful traders, potentially benefiting from their expertise and achieving similar returns.

5. Customize Copy Settings

Copin allows users to customize their copy trading settings, including trade size, risk management parameters, and asset allocation. This customization empowers users to tailor their copy trading experience according to their individual preferences, risk tolerance, and investment goals.

6. Monitor and Track Performance

Users can monitor and track the performance of the traders they have chosen to copy. Copin provides transparency in the trading activities and historical performance of these traders, allowing users to assess the success and risk profile of their copied trades.

7. Risk management solutions

Through the volume protection mechanism, Copin applies an averaging method using the trader's volume within a specified range of previous orders as a protective measure. If the trader's volume is significantly smaller than the average volume of the specified range, the copier account will copy a percentage of the initially set volume. This mechanism aims to maintain a balanced approach and manage risk for copiers.

Benefits of copying on-chain traders

On-chain traders who engage in copy trading benefit greatly

1. **Overcoming FOMO**
Copy trading helps combat impulsive and irrational trading decisions driven by the fear of missing out. By mimicking the moves of seasoned traders, you can tap into their disciplined approach and avoid hasty decisions.
2. **Time-Saving**
Copy trading reduces the need for extensive market monitoring, analysis, and manual trade execution. By copying skilled traders, you can trade more passively and save time on research and execution.
3. **Flexibility**
Copy trading platforms offer customization options for trade size, risk management, and asset allocation. This flexibility allows you to tailor the experience to your needs, goals, and risk appetite while benefiting from the expertise of others.
4. **Transparency**
Copy trading provides access to detailed information about the historical performance, risk levels, and portfolio composition of the traders being followed. This transparency enables informed decision-making based on your risk tolerance and investment objectives.

The Best Integrations

1. Metamask
 - Metamask is a crypto wallet & gateway to blockchain apps
 - Website: <https://metamask.io/>
2. GMX
 - GMX is a decentralized spot and perpetual exchange that enables users to trade BTC, ETH and other popular cryptocurrencies directly from their crypto wallets.
 - Website: <https://gmx.io/>
